SKILLS

.NET
MySQL & SQL Server
Microservices: Kubernetes, docker, etc
CI/CD: Bamboo

EDUCATION

Bachelor's Degree
Telkom University
2018-2021

Diploma III
Telkom University
2015-2018

PROFILE

As an experienced backend developer, I have a strong background in using the .NET Core to build robust and scalable applications. My main strength lies in my ability to write readable, tested, and efficient programs using the .NET Core. My focus on clean code and thorough testing ensures that the software solutions I deliver are of high quality and easy to maintain. In addition to my proficiency in C#, my primary programming language, I also have basic knowledges and experiences in Python, Java, PHP, Javascript, Dart and other languages. As a fast learner with strong logical skills and diverse experience, I am able to quickly adapt to new programming languages and technologies. My versatility enables me to work effectively on both backend and frontend development, delivering high-quality software solutions across a wide range of fields.

WORK EXPERIENCE

Backend Developer

Xtremax

2021- now

- Handling a big financial application from the start working here until now
- Working on development phase and currently on maintenance phase
- The applications is Microservices and I'm handling the backend side with 2 other backend developers
- The microservice is using Kubernetes, Docker, etc. We are also using CI/CD to streamline our development workflow
- The dev environment using AWS services (EKS, EC2, RDS, etc)
- I'm Handling for invoicing, 3rd party interfacing, reporting and collection services, which some of it are the core of the backend side
- Mostly, fixing bugs, develop Change Requests and code enhancements
- Some of my achievements are: 1. Enhance sqlview query and reduce the query cost by around 90%, 2. Enhance the 3rd party interfacing from 100s to just around 20s, 3. Create script helpers or applications that will help the repititive tasks to streamline my works as well as help the other developers
- We also use sonarqube to help us write the clean code
